

Product Data Sheet

Technical Data

Item number	15063 Resin Distribution Media	
Raw material	100% Polyester (321 dtex)	
Construction	Warp-knitted fabric	
Packaging	Roll of 100 m (=120 m ²)	
Weight per unit	100 g/m ² (=120g/m)	
Measures	Width: 120 cm	Thickness: 1.5 mm
	Length: 100 m	

Description

The resin distribution media is composed of a warp-knitted basic structure and monofilament-created loops.

The 2-dimensional flowing aid supports the vacuum infusion process (VIP), because it distributes the resin equally into the component part.

The elasticity of this knitted fabric is very advantageous for the drapability of the resin media. Because of the low weight per unit, low wastages of resin can be realized.
